

EXCLUSIVE DOORS

WHY DON'T YOU SHOW THE BEST PART OF YOU

Your door says much more about you than you might think.

When your guests set foot in your house, they think about you, about themselves and the way you make them feel welcome. They subconsciously register your status, ponder over who you are, think of your nature, your sense of style, elegance and imagination.

That's the same with you, when you come back home you want to believe that your door,

as well as being secure, will reflect your taste.

We believe that everyone wants to bring out their best.

That's the way we do and you're invited to follow us.

How are NEWAY doors constructed?

- 1 A 95mm thick door leaf with an overlay panel on both sides.
- Five-point black lock in three equipment standards, with hooks and ratchet bolts
- 3 Roller or covered hinges
- FZG cylinder in class C of burglary resistance
- In the case of doors with a side extension (one or two), the entire structure is made in one frame
- Fingerprint reader / Numeric keypad / RFID reader
- 7 Pull bar or handle on the outside
- 8 Handle from the inside
- Single-sided design or double-sided on request (selected models)
- 10 Anti-theft bolts of the hinge side
- n Cable feedthrough from sash to frame (electronics power supply and data transmission)
- Possibility to make doors with different colors externally / internally
- VSG 33.1 glass with black thermo frames
- 14 Three-chamber profile with thermal break
- Aluminum threshold, black, 20 mm
- 16 Triple seal
- 17 IO module for worldwide control

Presented in the catalog doors and accessories have in some graphic materials special equipment, beyond the basic standard "Silver" | Door catalog does not constitute an offer within the meaning of the Civil Code | The manufacturer reserves the right to make changes The specificity of printing on paper causes that the colors obtained during the varnishing and lining of door elements may differ from the colors shown in the illustrations and photographs, so they should be treated only as illustrative. This also applies to glass patterns and colors. All prices in the catalog are net prices. The value of VAT should be added to them, in the amount of 8% (when doors are ordered with installation service, offered by the Seller) or 23% (when doors are ordered without installation). All rights reserved © Reproduction and use, in part or in whole, only by permission of Firma Plastixal Kolakowski Mariusz.

3 door standards

High standard, great quality, reliability

All of NEWAY standards

are equipped with exclusive black trim and black cylinders

Maksimum możliwości, najwyższy standard

SILVER

A multiple-point locking device with hooks and ratchet bolts.

This combination offers maximum security: steel bolts prevent the door from being forced, and hooks prevent the frame and leaf from being pulled away from each other.

Completely sealed door closure guarantees high thermal insulation.

Closing and opening with a key.

mechanical locking device with

help of mechanical triggers. The released when the door is closed. means of mechanical SoftLock triggers integrated in the latch bolts.

opened with a key, access control system or telephone.

lock slat (slider) and Comfort function₁

PLATINUM

Full-motor lock with hooks and ratchet locks.

Fully automatic locking using an Halla sensor.

A standard IO module that enables control from anywhere on earth, as well as connecting and controlling third-party systems from Siegenia Comort applications.

The door can be locked and unlocked with a key, access control system or telephone.

Integrated daylight unlocking on the lock slat (LED button)

An integrated Comfort function that allows the door to be unlocked with a single movement of the handle.

Lock anti-burglary class

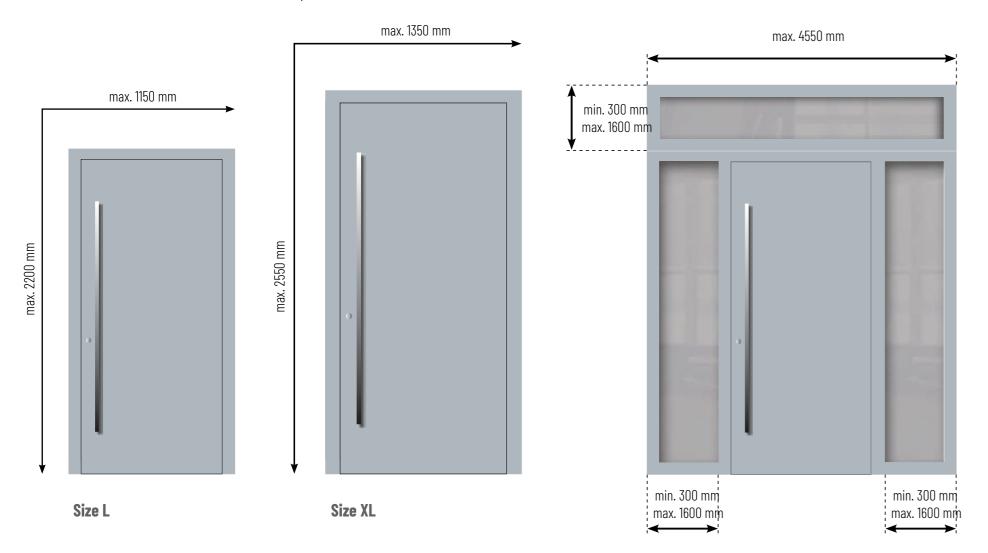

The doors presented in the catalog are available according to the price list in sizes within the L and XL size ranges.

On special order, we also produce doors with sizes beyond the XL size range and they are priced individually.

Doors over 2550 mm in height are made in Silver only.

Lightings below and above the dimensions given in the drawings are not covered by the warranty.

Door models H307, H308, H309 are manufactured up to a maximum size of 1200mm x 2450mm.

Parameters confirmed by tests and certificates for a reference door 1230x2180 mm

Inward opening door with side light (frame C, type T)

BLAC design

Set apart - NEWAY brand doors are unique

Our doors have been equipped with black handrail, black handle, black hinges and other hardware and black control electronics

SAFETY PLUS

Each NEWAY door is equipped with the PLUS security package

The package includes: the highest burglary resistance class "C" insert, anti-burglary bolts on the hinge, safety glass (applies to the pane as part of the active sash), and espagnolettes with locks of burglary resistance class RC3

Security is our standard

Class C cylinder - excellent resistance to burglary

- highest level of security against burglary
- 6 lockinas pins
- special shape of lock cylinder that affects its durability
- cylinder pins hardened with a nickel coating
- housing pins: made of brass and steel
- protection against drilling the cylinder
- 5 keys with a special profile resistant to opening by
- key replacement with security card

Safety glass 33.1

All glazing packages in the door leaf are equipped as standard with safety glass VSG 33.1 and black polyurethane frame with increased thermal insulation.

- They provide additional security against attempts to break down the door when the lock cannot be forced.
- Interlocking with each other, the two wedging elements effectively protect the areas most vulnerable to burglary, making it virtually impossible to break the door on the hinge side.
- Effective optimization of burglar protection.
- A completely concealed solution with a simple modern form.

Quiet, quieter, soft-lock

For doors that are opened several times a day, silent closing makes an advantage and ensures stress-free operation. The Softlock has a stable plastic cap on the latch, which means that nothing but a quie click is heard from outside. The lock loses none of its durability and security at the same time.

Additional door equipment electronics and security

Door closer concealed in the leaf

The retractable door closer for single leaf doors is completely hidden in the leaf plate. The sliding rail is visible only when the door is open. In addition to the high aesthetics of this solution, its undoubted advantages include the fact that the elements for adjusting the closing speed, closing function and opening damping are available after the door closer is embedded in the leaf.

Access control up to the 21st century standards

As part of the GOLD and PLATINUM standard, the door's espagnolette dri-ve mechanism can be activated not only with a key, but also with a finger-print reader or numeric keypad, making opening the door easy and pleasant, and allowing access only to authorised people, even if they don't remember to grab their keys. Communication with the system is provided via bluetooth. Special-purpose application enables managing the equipment. A WiFi lo Smart module is also available to enable door operation from anywhere on Earth.

Automatic door closer concealed in the door leaf

The operator is recessed into the door leaf or frame and meets the highest stylistic requirements. The opening and closing speed can be adjusted individually. The low-power mode function opens the door with reduced travel speed, thus meeting the highest safety requirements. The obstacle detection system recognizes an obstacle by touch and stops the opening or closing process. Automatic reversing recognizes the obstacle and reverses to the opening position.

Daytime unlocking

Temporarily disabling the automatic function with a small lever or LED button located on the faceplate allows you to leave and return to the building without a key. The solution can be used in conjunction with a day/night module or an electric door strike.

Day/night function

With this function, you can easily release the catch of the main lock and auxiliary locks with a slider just by adjusting the mechanical lever at the three modules. This function does not require an electric strike.

Electric strike with day/night function

An aversion electric strike is a type of striker which, upon receiving a current supply, opens the locking mechanism of the tongue lock. Version with a switch.

What are the advantages of choosing the PLATINUM option?

- 1. Multipoint locking system with GENIUS drive enables fully automatic, secure and convenient locking, either traditionally with a key or electronically with SMART solutions.
- 2. Magnetic release for quiet and gentle door locking.
- GENIUS power supply supports all the electronic devices of the NEWAY doors. No need for several different power supplies.
- Aesthetically pleasing and durable, the built-in cable entry that powers the door electronics conceals cables from view and protects them from damage.
- 5. Access control system can be linked to numerous smart home devices such as actuators, security system, alarm system, smart phone, etc.

The PLATINUM standard also includes:

- Permanent monitoring of correctness of locking perfect tightness of locking (incomplete locking is signalled acoustically).
- In case of inadvertent failure to turn the key to close the door, the automatic multi-point locking system will do it for you (in case of burglary, the validity of insurance is preserved).
- A switch on the front panel allows you to adjust the locking mode of the espagnolette - day/night and leave the house without a key.
- Comfortable and quick opening from the inside using the handle ("Comfort" mechanism), which unlocks the door and, in addition to being comfortable, allows immediate escape in the event of an emergency occurring inside the building.
- Control by the KFVkeyless app from anywhere in the world and the Fingerprint app for fingerprint reader operation and user management.

Additional door equipment electronics and security

Switch, microswitch or microsensor

Operation and compatibility with door openers or electric strikes of most manufacturers on the market, allows door opening.

Microswitch and microsensor touch - common features:

- Operation and compatibility with electro strikers or electro locks of most manufacturers on the market, allows opening and closing doors,
- Control of an external device, such as building lighting,
- Momentary pushbutton function for connecting a bell, for example,
- Selectable option with or without bell engraving

Microswitch:

• Controlling the light points in the handle on an on/off basis

Microsensor:

- Ability to control one or two independent electrical systems: single-function or dual-function electronics,
- Control of light points in the handle, including the possibility of 30s timed illumination
